SUMMARY

Savvy Full Stack Web Developer, eager to create applications and assets to grow usership. Passionate about presenting users with useful and attractive sites using building principles and programming language skills. Excellent communication skills and full of ideas as I've partnered with classmates to create functional Full Stack projects. I am now eager to tackle more complex challenges and continue to find ways to advance my career working on real-world problems. Proven to be a leader in past and present positions, assisting in training and always supporting others.

SKILLS

- **Languages:** JavaScript, CSS, HTM
- **Framework:** Express.JS, Node.js
- **Libraries:** React, jQuery
- **Database:** Mongoose, MongoDB
- **Authentication:** Json web token, Bcrypt
- **Technical:** Git, Github
- **Soft Skill:** Problem-solving, Critical thinking, communication, self-learning

In a developer role at your company I will...

- Knowledge and expertise in various programming languages and framework
- Eagerness to learn rapidly and grow and bring fresh perspective to a team
- Collaborate effectively with team members, participating in decisions and offering suggestions
- Applying analytical skills to identify and resolve issues
- Adaptability and Flexibility
- Strong and positive work ethic, reliable, punctual and committed to my task and responsibilities.

EDUCATION

V School - Full Stack Web Development Certificate

Utah, 2022 - 2023

- Web Development course with 6 complex levels to prepare students to deliver robust and effective products.
- Learned frontend fundamentals, problem solving techniques and one of my favorites CRUD.
- Advanced React concepts, using React Router, creating forms JavaScript, HTML & CSS.
- Fluent on the back-end/server-side programming using Express framework in Node.js, and database programming with MongoDB, Mongoose, Authentication and Jsonwebtoken.
- Completed this course remotely while working full-time

Houston Community College

Houston, Texas 2018

EKG-Technician

CCT certified EKG Tech

- Trained to read and monitor the heart's electrical activity
- Hands on practice preparing various test methods like, Holter monitoring and exercise stress testing

EXPERIENCE

Boston Scientific - EKG Tech

Houston, Texas 2018 - present

Responsible for recognizing serious and critical heart activity. Maintain confidential records on patients while documenting the results manually and creating reports. Responsible for contacting the Cardiologist in a timely manner regarding the patient's protocols. Prioritize and juggle multiple tasks to ensure high quality and timely delivery.

Houston Methodist - Sterile Processing Technician

Houston, Tx 2017 - 2018

Prepared instruments for sterilization procedures and decontamination protocols. I prepared 40 plus case carts with proper instruments and surgical supplies. Assembled and wrapped trays, working successfully with diverse coworkers to address issues to better our services.

Wetherford - Data Analyst**Houston, Tx 2013-2015**

Working with a high degree of accuracy, I multitasked between two databases corresponding with data uploaded from the oil field. Communicated with sales reps daily concerning online issues and general questions. I recognize problems and turn solutions into actions making sure clients receive accurate data in a timely manner. Provide monthly reports to management, creating spreadsheets and ideas to improve inefficiency.

PROJECTS**Legacy 1st.** (<https://legacy1st.cyclic.app>)

An investment website that allows the user to choose between three different options to invest in including the class price. Each user is prompted to create a username and password before exploring the site and I implemented a public page that renders all users questions and concerns. I displayed a working knowledge of React.JS, Node.JS, MongoDB, and RESTful methods to develop frontend design, client-side validations, proximity lookups, and the API framework.

- Constructed API following RESTful standards.
- Used mongoose and MongoDB to test databases and models.
- Express to connect Front-end to backend and dataContext to render API requests.
- Addressed authentication and security concerns with JWT tokens, and the Bcrypt library.
